

# Evaluation in evaluation ecosystems

Ian Goldman  
30 September 2022

1

1. The **development paradigm** has failed – trickle down, consumerism, ‘modernization’ is destroying the planet, fuelled by vested interests
2. There are **regenerative models**, but we need to move beyond exploitation to apply **head/heart and hand** to make a regenerative world happen, now
3. All too often the **evaluation field has been complicit** in the development failure
4. To be part of the solution **evaluation needs to be transformed**, from what worked to what will work
  - **Evaluative practice** needs to be **contextually relevant**, embedded in local systems, taking a wider **systemic perspective** include climate, ecosystems and equity, and in demand by policy makers
5. To systematize and use the evidence we need **transformed evaluation (eco)systems**, with evaluation integrated into management and decision-making

## The development paradigm has failed – trickle down, modernization.....

3

**South Africa**

**Another major SA city runs out of water**

The country's fourth largest city, Gqeberha, is about to run out of water after drought and long-term mismanagement of its water resources.

But one of the tunnels collapsed several years ago and the water stopped flowing. When the state failed to repair this infrastructure, drought spread in earnest. Now the dams that supply the metro are empty or near-empty.

Good governance is in short supply, with control of Gqeberha constantly swapping hands between coalitions of competing parties. Amid the squabbling, decisions on solving the looming water crisis were simply not made.

Gqeberha also uses a lot of water – 500 megalitres a day. Cape Town, with four times the population, was using 300 megalitres when its taps ran dry a few years ago. Much of this is thanks to a lack of maintenance: South Africa loves at least a third of its tap water through leaks.

In the face of its own failures, the city has been left with few options other than to pray for rain.

Gqeberha is a key node in South Africa's economy. The city's car-making industry exports parts and vehicles around the world. It is in the heartland that birthed the ruling African National Congress's greatest leaders. Now its taps are running dry, with emergency boreholes, water tankers and the army deployed to help manage the crisis.

Climate change projections for the region are for more variability in the weather, with droughts – already common enough – becoming more intense.

Previously, a chain of dams, rivers and canals was able to bring in an emergency top-up from Lesotho, which has surplus water thanks to its massive mountains and deep dams that catch snow melt and rainwater, which it sells to South Africa.

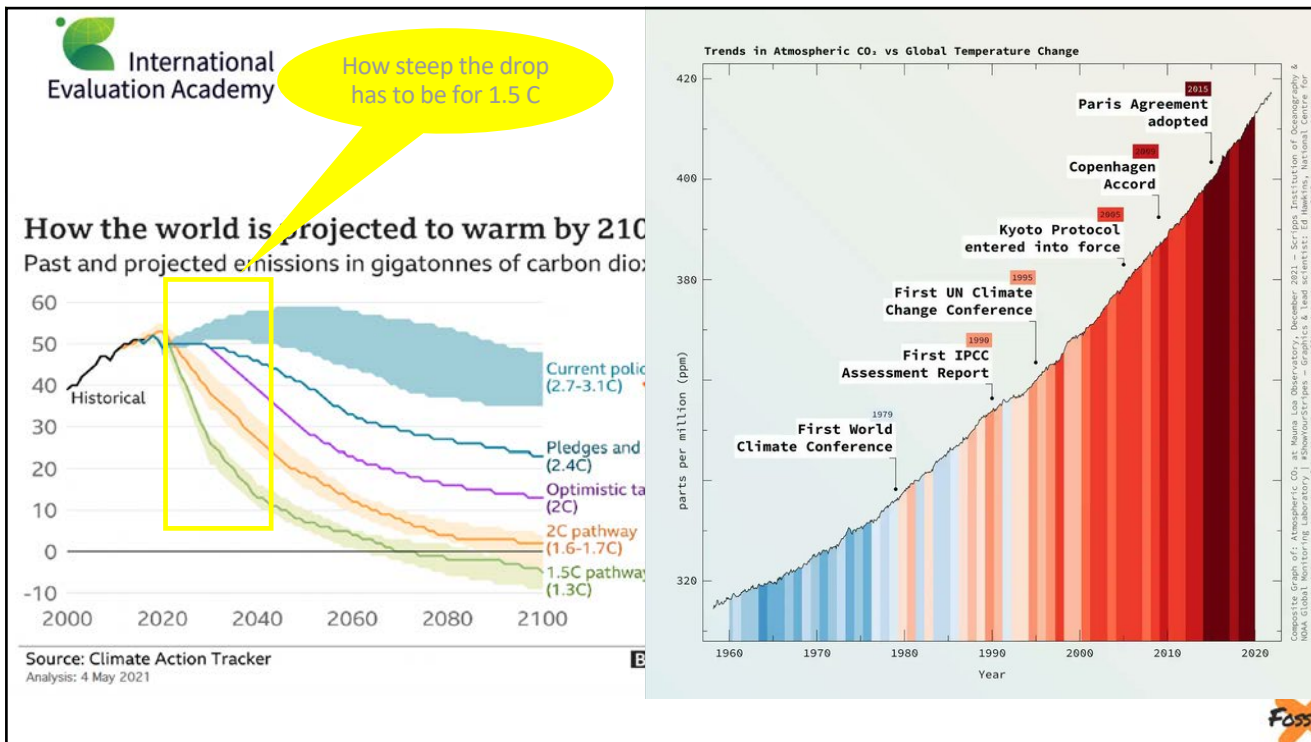

**Dam nation: Drought and mismanagement have led to another water crisis.**

**Fires rage at Longmore Forest in Knysna on 7 June 2017. More than 10 000 people were forced to flee their homes overnight as fires fuelled by storm winds ripped through the Western Cape coastal town. (Photo: Gallo Images / Die Burger / Werner Hills)**

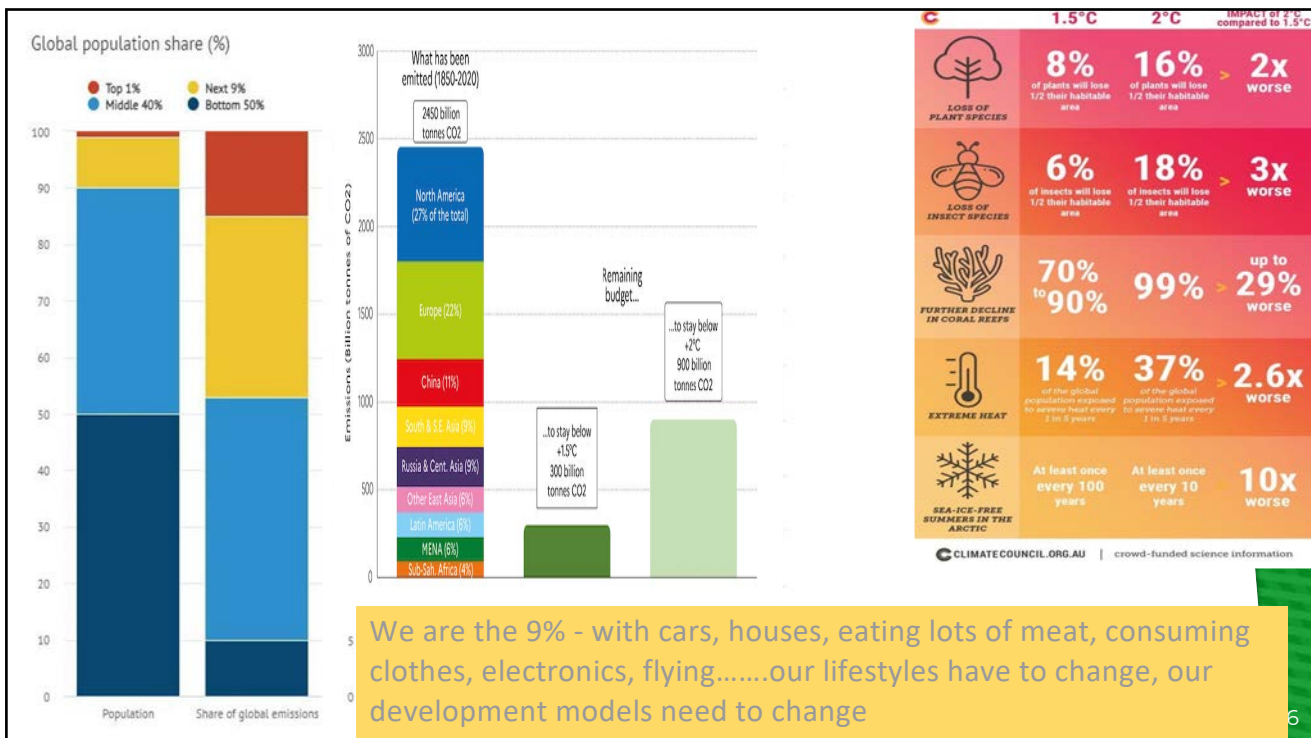

Line graph showing carbon dioxide level (parts per million) over time (years before today). The graph shows a significant increase in CO2 levels starting around 1950, reaching a current level of approximately 415 ppm. A horizontal line is drawn at approximately 280 ppm, labeled "For millennia, atmospheric carbon dioxide had never been above this line".

# The trickle down model does not work

7

## Where has the Western mindset got us?

- ▶ The world has been colonized, not just economically, but in our mindset
- ▶ Above all turned into materialists and consumers – not people who relate to others (ubuntu) or to the sacredness of the world around us
- ▶ Everything is to be exploited for the benefit of humans, and a few at that
- ▶ Taught that is normal, inevitable, and that benefits will trickle down
- ▶ And where has that got us

**Figure 2: Wealth distribution in South Africa**

**Interpretation:** In 2021, the wealthiest 10% of the population own 87% of total household wealth. Household wealth is the sum of all financial assets (e.g. stock, bonds) and non-financial assets (e.g. housing), net of debts.

## Evaluation needs to be transformed.....

- 

15

International Evaluation Academy

## Role of evaluation

- ▶ Traditionally role in querying **what is working/not and why**
- ▶ needs to consider **what will work** in the future, taking into account more complex systems than we are used to looking at, unintended outcomes of interventions and contributing to foresight
- ▶ Must consider issues of climate/ecosystems and equity

<p><i>Equity Guideline</i> 13 July 2022</p>  <p><b>planning, monitoring &amp; evaluation</b> Department: Planning, Monitoring and Evaluation REPUBLIC OF SOUTH AFRICA</p>	<p><b>Evaluation Guideline No 2.2.2?</b> Integrating a transformative equity criterion into evaluations for promoting transformative systemic change</p>	<p><i>DPME Evaluation Guideline 2.2.22 Climate and Ecosystems Health</i> 19 July 2022</p> <p><b>DPME Evaluation Guideline 2.2.22</b> Guidelines for applying the climate and ecosystems health criterion in the commissioning, design and implementation of evaluations</p>

16

**Prague Declaration on Evaluation for Transformational Change**  
Adopted on Friday 4 October 2019

We commit to evaluations that help us learn, understand and support the transformational and systemic changes needed in our countries and the world, as agreed upon in the 2030 Agenda for Sustainable Development. A sustainable balance between the social, economic and environmental domains is crucial in light of the existential threats of the climate crisis, mass extinction of species, growing local and global inequity, and ultimately unsustainable use of the resources of the planet.

It also needs using a broad understanding of evaluative practice with a diversity of tools which feed into adaptive management, are adaptive and rapid, and linked to decision-making.

17

17

### Importance of context

- for evaluation to contribute it needs to be contextually relevant, embedded in local systems, and in demand by policy makers

<b>Significance of the policy challenge/ question</b>	Commitments made to international or regional agreements
	High levels of financial investments
	Legal requirement for legislative review
<b>Catalysts of change</b>	Crises
	Pressure from development partners
	Pressure from civil society
<b>Broader political and socio-cultural environment</b>	Timing, for example, proximity to election period
	Space for public participation and civil society engagement
	Level of interest and engagement of stakeholders
<b>Institutional environment</b>	Systems and processes
	Evidence champions
	Leadership
	Mandates and capacities
	Culture – Learning and accountability
	Linkages and relationships

## Some ideas for evaluations which go beyond the plumbing to state of the house

- ▶ Expand the **scope**: look further than short-term results and immediate accountability, towards generational accountability, what will work.
- ▶ Seek to evaluate **outside traditional silos**: across issues/sectors; across funding streams/donor priorities; across thematic areas and SDG objectives.
- ▶ Ensure **diversity of perspectives** and experiences in evaluation teams, and in methods used.
- ▶ Require evaluations to **identify, recognize and map the environment** in which programmes and evaluation operate. Identify the climate, environment and equity implications linked to that place.
- ▶ Look at problems through a **global lens and re-value local solutions**, including ancestral ones. Advocate for programmes to systematically consider ancestral indigenous knowledge and support them in embedding potential solutions in interventions and systems

To systematize evidence we need evaluation ecosystems

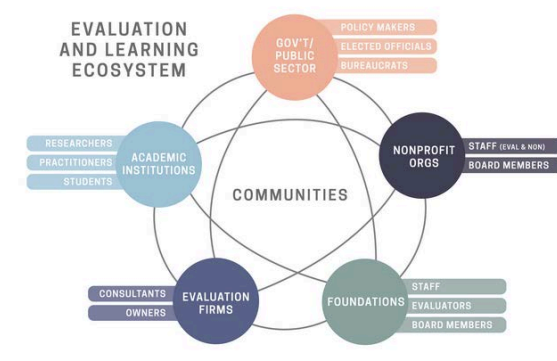

<https://aea365.org/blog/evaluation-as-an-ecosystem-building-our-ability-to-collaborate-effectively-by-liz-gordillo-roxy-neuner-leah-josephson-and-lauren-beriont/>

## Ecosystem and system

- ▶ An **ecosystem** is a community of organisms/ organisations interacting with each other and with their environment.
- ▶ A **system** is a collection of organized things; a whole composed of relationships among its members.

**What do we mean by an M&E System?**

When we talk about GEI's focus on monitoring and evaluation (M&E) "systems" we do not mean just the feedback systems that may guide program implementation or discrete evaluation studies that may be done.

What we mean is a country's overall ecosystem around M&E – all the structures, attitudes, incentives, approaches, policies, laws, behaviors, skills and abilities that contribute to whether robust monitoring, evaluation and evidence use happens.

21

## National/sectoral systems, ones that are locally relevant

- ▶ System exists when evaluations are no longer commissioned and conducted on an 'ad hoc' basis but through **more permanent arrangements**, which aim to guarantee, in advance, the **supply of evaluative information...** [and] at the same time, the **evaluations conducted are put to suitable use"** (Furubo and Sandahl 2008)
- ▶ Associated with a particular political and **administrative system**
- ▶ Intertwined with **values**, practices and institutions

So not ad-hoc – structured and systematically bringing evidence into decision-making

**Evaluation systems recognise:**

1. An ability to provide sound evidence (the **supply side**)
2. Capacity within the system for individuals and institutions to use information (the **demand side**)
3. Role of intermediaries like M&E units who broker demand and supply of evidence, and sometimes co-creation (**knowledge brokers**)
4. Other elements eg training (unis), evaluators, advocacy (eg VOPEs, CSOs)....

22

22

System Type	Possible elements
Formalised/ informal systems	<ul style="list-style-type: none"> <li>The system is either recognised or not recognised through formalisation of a policy/practice</li> <li>Mexico formalised, Zambia informal</li> </ul>
Centralised/ decentralised	<ul style="list-style-type: none"> <li>Central institution coordinating the whole system</li> <li>Or decentralisation of the system</li> <li>Or no control and system fragmented.</li> <li>SA – centralised institution but degree of decentralisation to provinces and sectors</li> <li>Ghana - fragmented</li> </ul>
Sectoral evaluation systems	<ul style="list-style-type: none"> <li>Often sit within the broader system systems.</li> <li>Common in education and health eg South Africa, Kenya, and Zambia</li> </ul>
Project systems	<ul style="list-style-type: none"> <li>3ie</li> </ul>
Organisational systems	<ul style="list-style-type: none"> <li>donor systems</li> </ul>

23

23

## We need systems fit for the future

- ▶ adapted to address emerging development challenges, e.g climate and ecosystems breakdown and equity, and to question failing developmental models
- ▶ From doing things right to doing the right thing?
- ▶ Variety of evaluative tools, for different timescales:
  - ▶ Evaluative thinking models for rapid inputs, throughout the programme cycle
  - ▶ Rapid evaluations
  - ▶ Longer more rigorous where needed
- ▶ And agencies need to support these systems, not undermine them

## Summary

27

## Summary

1. The **development paradigm** has failed – trickle down, consumerism, ‘modernization’ is destroying the planet, fuelled by vested interests
2. There are **regenerative models**, but we need to move beyond exploitation to apply **head/heart and hand** to make a regenerative world happen, now
3. All too often the **evaluation field has been complicit** in the development failure
4. To be part of the solution **evaluation needs to be transformed**, from what worked to what will work
  - **Evaluative practice** needs to be **contextually relevant**, embedded in local systems, taking a wider **systemic perspective** include climate, ecosystems and equity, and in demand by policy makers
5. To systematize and use the evidence we need **transformed evaluation (eco)systems**, with evaluation integrated into management and decision-making

28

28

**We are living in a mass ‘delusion of normalcy’ that is socially transmitted. Everyone is acting normal so it must all be ok so I’ll just go with the flow. How do we intervene in this ‘delusion of normalcy’?**

**Margaret Klein Salamon**

We must question our practice now and start making the changes

- which conference will I not go to?
